

Neonumy photo album test

Create a webpage to upload and list images

Objective

Create a website to upload images and list them. **Although it is nice to have aesthetics and UX are not the purpose of this test. Functionality over aesthetics.**

- Create a page to list all uploaded images with thumbnails.
- Each image should have a button to go to details where it shows the image in its real size
- Create a button to delete the image
- Create a page to upload new images
- Create an API that covers all CRUD actions
- Add a readme file with instructions on how to run the project for development.
- Use Postgres as your main database

Requirements

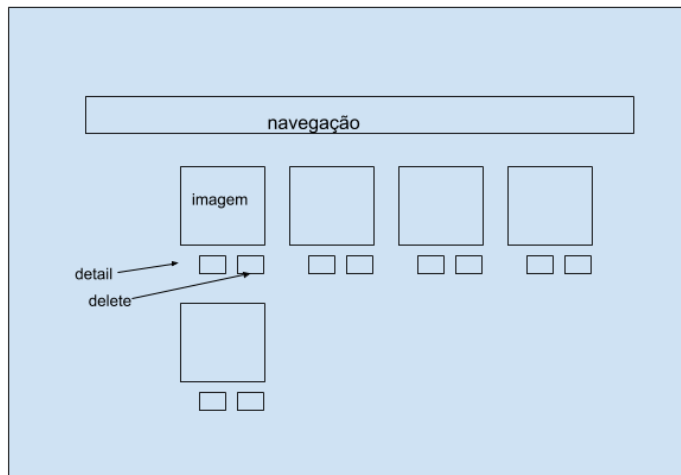

- Git
- Django or Flask with Python 3
- HTML
- Postgres

Bonus tasks

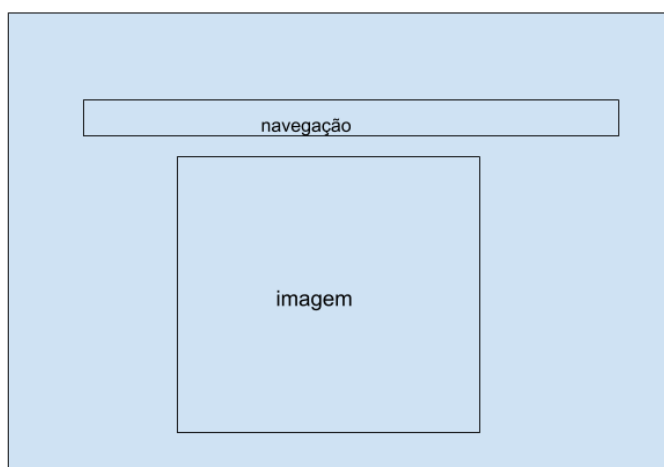

- Make the API in GraphQL
- Setup the project in Docker
- Setup docker-compose
- Create some unit test for your logic
